

ASHISH KUMAR

Full Stack Developer | MERN Stack | Node.js · React.js · PostgreSQL · Docker · AWS EC2

+91-9693263085 | ashishkyadav.dev@gmail.com | Portfolio | Chhattisgarh, India | Remote / On-site | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Full Stack Developer with 1 year of production experience building and shipping scalable SaaS applications using the MERN stack, PostgreSQL, Docker, and AWS EC2. Delivered KarigarHQ, a multi-tenant Repair ERP SaaS with 4-tier RBAC, 9-stage repair lifecycle automation, inventory management, billing, and 20 integration tests from schema design to Dockerized production deployment on AWS EC2. Maintained Phoneo's live SaaS platform serving 50 active retailers and its public marketing website that onboarded 4,300 mobile shops across 100 cities in India. Strong in REST API design, PostgreSQL query optimization, CI/CD pipelines, and end-to-end feature delivery under real client constraints. National hackathon finalist - top 230 of 26,000 teams (NCIIPC-AICTE 2025). Micro1 Certified.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, SQL

Frontend: React.js, Next.js 14 (App Router), Redux, Redux Toolkit, Axios, Tailwind CSS, HTML5, CSS3

Backend: Node.js, Express.js, REST API Design, JWT Authentication, WebSockets, Middleware, RBAC

Databases: PostgreSQL (schema design, indexing, window functions, query optimization), MongoDB, MySQL, Prisma ORM, Redis

DevOps: Docker, GitHub Actions CI/CD, Nginx, AWS EC2, VPS Deployment, Git, GitHub

Automation: n8n Workflow Automation, OpenAI and Gemini integrations, RAG pipelines, WhatsApp Business API

Tools: Postman, VS Code, Firebase, Vercel, Netlify, Turborepo

Concepts: Multi-Tenant SaaS Architecture, RBAC, System Design, API Design, OOP, DBMS, Agile, CI/CD, DSA

EXPERIENCE

Full Stack Engineer · Botivate Services LLP · Raipur, India

Aug 2026 - Present

- Spearheading full-stack web development and automation across the product - delivering new features, optimizing existing modules, and owning CI/CD pipelines and deployment infrastructure end to end.
- Improved application performance by refactoring slow database queries, adding targeted indexes, and restructuring data access patterns across 3 core modules - reduced query execution costs and average API response time.
- Automated the purchase approval workflow using WhatsApp Business API - owners receive instant WhatsApp notifications with full purchase details and a PDF link; a single tap on the in-message approve or reject button processes the decision without opening any dashboard, saving 30 minutes of manual review daily.
- Shipped a month-wise purchase tracking dashboard showing approved, rejected, and pending counts - replaced manual spreadsheet tracking with a live real-time view for business owners.

Product Engineer - Full Stack SaaS · Phoneo · Bhilai, India

May 2026 - Jul 2026

- Architected KarigarHQ - a multi-tenant Repair ERP SaaS with 4-tier role hierarchy (Super Admin, Owner, Admin, Technician) and branch-level data isolation; each branch accesses only its own repair records, inventory, and billing data.
- Engineered the complete 9-stage repair lifecycle (Customer Intake, Ticket, Assignment, Diagnosis, Estimate, Parts Consumption, Billing, Payment, Handover) - automated all stage transitions with zero manual steps between stages.
- Reduced deployment time from 45 minutes to under 5 minutes by configuring GitHub Actions CI/CD with Docker containerization and Nginx reverse proxy on AWS EC2 - maintained zero-downtime releases across all production updates.
- Validated platform reliability through 20 backend integration tests covering authentication, RBAC enforcement, tenant isolation, workflow transitions, inventory deduction, billing, and customer handover flows.

Frontend Developer · Phoneo - seller.phoneo.in · Bhilai, India

Feb 2026 - Apr 2026

- Launched Phoneo's public-facing marketing website using React.js and Next.js - primary acquisition channel that contributed to onboarding 4,300 mobile shops across 100 cities in India.
- Integrated lead capture forms, demo scheduling flows, and CTA conversion funnels with backend REST APIs - reduced manual sales outreach effort by 60 percent and accelerated the B2B pipeline.
- Resolved a critical live production bug affecting the demo booking flow - shipped a fix within 2 hours with zero client downtime and no data loss.

Web Developer · Rungta College Incubation Center · Bhilai, India

Feb 2023 - Nov 2024

- Founded and led a startup product under the college incubation program - shipped 4 major full-stack release cycles to early users over 21 months with zero production rollbacks.
- Maintained code quality and Git workflows across a 4-person team - enforced PR review standards with zero merge conflicts and consistent deployment cycles throughout the project.

PROJECTS

KarigarHQ - Multi-Tenant Repair ERP SaaS

React.js, Node.js, Express.js, PostgreSQL, Prisma ORM, Redis, Docker, JWT, AWS EC2, Tailwind CSS | 2026 - Present

- Designed multi-tenant SaaS architecture supporting 4 role tiers and branch-based data isolation - each shop branch accesses only its own repair records, staff data, inventory, and financial reports.
- Covered complete operational scope: billing with invoice generation, inventory with automatic stock deduction on parts usage, vendor management, profit calculation, and immutable audit logs across all 9 repair workflow stages.
- Secured with JWT authentication, role-based authorization middleware, and tenant-aware API validation - 20 integration tests confirmed zero RBAC bypasses and correct data isolation across all tenant boundaries.

AiGateway - Multi-Tenant AI SaaS Platform

Next.js 14, Node.js, TypeScript, MongoDB, PostgreSQL, n8n, Docker, AWS EC2, Turborepo | 2026 - Present (Development and Testing Phase)

- Architected Turborepo monorepo with 3 Next.js applications sharing common packages - Python FastAPI services power AI agent workers while Node.js handles core API and authentication layers.
- Deployed Lead Research Agent using n8n and LLM: discovers target businesses, scores leads from 0 to 100, and enforces a human-in-the-loop approval gate before CRM insertion - prevents unvalidated data from reaching production.

Secure Digital Voting Platform

React.js, Node.js, Python FastAPI, Flask, MongoDB, Computer Vision, Face Authentication | Feb 2024 - Present

- Delivered backend services in Python FastAPI and Node.js for a tamper-proof voting system - ACID-compliant session management and encrypted record keeping enforced one-person-one-vote integrity with zero duplicate submissions across all test scenarios.
- Integrated face-based biometric authentication using Computer Vision with the Node.js API layer - eliminated proxy voting at the authentication stage with 97 percent detection accuracy in testing.

EDUCATION

B.Tech - Information Technology | Rungta College of Engineering and Technology, Bhilai | Aug 2022 - May 2026 (Graduated)

Relevant coursework: DSA, OOP, DBMS, Operating Systems, Computer Networks, Software Engineering.

ACHIEVEMENTS AND CERTIFICATIONS

National Finalist - NCIIPC-AICTE Pentathlon 2025: Top 230 of 26,000 teams (National Cybersecurity Hackathon).

National Finalist - CIH 2.0 National Hackathon 2025: Recognized for innovative technology solutions at national level.

Micro1 Certified - Vetted through AI-led technical recruiter screening on the Micro1 global talent platform.

AMCAT Top 15 Percentile (June 2025) - SHL quantitative and logical reasoning.

Coding: 150 problems solved, 90 percent acceptance rate - LeetCode, GeeksforGeeks, HackerRank.

Certifications: Full Stack Web Development (2023) - Data Science and AI/ML (2024) - DSA Bootcamp (2023) - Java, Python, ChatGPT Prompt Engineering, Canva

Languages: English (Professional) - Hindi (Native)
